

Our Vision for Science

At our school, we understand the importance that science holds to our future.

We are becoming **skilful, curious scientists** who want to find out about the world.

We are learning to appreciate and understand the **world in all its fullness** (John 10).

Our lessons are **exciting** and **everyone is involved**.

Our teachers **inspire us**. We **question, explore and challenge** scientific thinking to gain a **deeper understanding** of the world around us.

We do **practical investigations and enquiries**.

Our **Christian values** are at the heart of our science learning, where exploring our values through science will create scientists who have **strong morals and a desire to make the world a better place**.

Teach children how they should live and they will remember it all of their life.

Proverbs 22 V 6

Principles

Science is good when...

We ask questions	We have moments of wow, awe and wonder
We take risks	There are real world experiences and we learn outdoors
We are global citizens who develop our values and morals	We develop our scientific knowledge (assessment)
We write in science to show our knowledge and understanding	We find out rather than being told
